Personal Statement

Computer Science graduate from Gilgit-Baltistan, Pakistan, applying machine learning to glacier flood data from my own region. I taught myself machine learning after graduation and have published several projects on GitHub, including a preprint on glacial lake outburst floods. I am seeking a Master's in Artificial Intelligence / Machine Learning to develop my research skills under expert guidance and build technology that helps communities in developing regions like mine.

Research Interests

Machine Learning • Artificial Intelligence • Data Science • Climate and Natural-Hazard Risk

Preprint

Ali, S. (2026). *Predicting the Recorded Impact of Glacial Lake Outburst Floods in Gilgit-Baltistan: What a Small Event Database Can and Cannot Teach a Machine Learning Model.* Zenodo preprint (not peer-reviewed). doi.org/10.5281/zenodo.24083145

Machine Learning Projects

GLOF Impact Classifier — *Python, scikit-learn, pandas | 2026*

- Used the HMAGLOFDB database (703 recorded GLOF events across High Mountain Asia) and modelled the 137 events in Gilgit-Baltistan to predict whether an event had any recorded impact on people, property or land (59 of 137 did).
- Compared Random Forest, Gradient Boosting, Decision Tree and Logistic Regression with leave-one-out cross-validation: Gradient Boosting reached 70.1% against a 56.9% majority-class baseline, and location alone gave about 65%.
- Checked robustness: 200 random 80/20 splits ranged from 50.0% to 89.3%, so I report cross-validated results. Location and year carried most of the signal, which is consistent with the models learning where and when events were documented.
- Personally motivated by GLOF risk in Chorbat, Ghanche, my family's home region.

GitHub (notebook, charts, results and limitations): github.com/Sulemanali002/GLOF_Impact_Classifier

Fake News Detection using NLP — *Python, scikit-learn, NLTK | 2026*

- Built a text classification pipeline to separate real from fake news using a ~44,000-article dataset.
- Used TF-IDF features and compared Logistic Regression, Random Forest, Decision Tree and Passive Aggressive classifiers.

GitHub: github.com/Sulemanali002/Fake-News-Detection-using-NLP-Pakistan-Focus

Flood Risk Predictor — *Python, scikit-learn, pandas, seaborn | 2026*

- Built a binary classifier (HIGH / LOW flood risk) on 50,000 records from a public Kaggle dataset, converting raw flood probability scores into labels through feature engineering.
- Compared Random Forest and Decision Tree models; feature importance showed MonsoonIntensity and TopographyDrainage as the strongest predictors.

Academic Background

BS Computer Science (2021 – 2025)

- University of Baltistan Skardu (UOBS), Gilgit-Baltistan, Pakistan
- CGPA: 2.8 / 4.0
- Relevant coursework: Data Structures, Algorithms, Database Systems, Software Engineering, Python Programming, Artificial Intelligence

Final Year Project: Smart Electricity Billing Management System

Team project, supervised by Dr. Jawad Usman Arshad. My main role was UX/UI design of the Android app and the web-based backend system (screen layouts, user flows, wireframes) and all project documentation (UML, DFDs, use case diagrams, test case specifications), with a small contribution to the coding. The system used OCR (ML Kit) for meter reading, a Python (Django) backend for automated bill generation, and Jazz Cash for payments.

Award: Best Project — UOBS Computing Society Project Expo 2024

Professional Experience

Digital Community Manager | Cozycozy *June 2026 – Present (remote, freelance)*

- Manage community engagement on Reddit and Facebook for an international travel accommodation aggregator.
- Create organic content, answer user questions and develop content strategies that increase participation and trust.

Earlier training: eBay Virtual Assistant internship (3 months, 2023–24); E-Commerce training, Software Technology Park Skardu (Jan 2025).

Certifications and Awards

DataCamp (Feb 2026): Feature Engineering for Machine Learning in Python; Introduction to Data Science in Python; Understanding Machine Learning; Understanding Artificial Intelligence. **HP LIFE:** AI for Beginners (Feb 2026).

Awards: Best Project, UOBS Computing Society Project Expo (2024); Certificate of Appreciation, Tech Expo and Fun Fair 2024.

Volunteer and Community

- **Volunteer and Member, UOBS Computing Society (2021–2025):** helped organize seminars, workshops and student events; took part in the World Environment Day event organized by WWF-Pakistan and UK International Development (June 2024).
- **Private Tutor, Skardu:** home tuition for school-level students, exam preparation.

Skills

Programming: Python, JavaScript, Java

Data and ML: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Jupyter Notebook

Design and tools: UX/UI design, wireframing, MS Office, Canva

Languages: English (working proficiency), Urdu, Balti (mother language)
